JONATHAN E. GASPADO

Senior Full-Stack Developer & UI Designer

nahtanojako@gmail.com 0927-834-9149

nahtanojako.github.io/jonathan-portfolio

PROFESSIONAL SUMMARY

Full-Stack Developer and UI Designer specializing in high-performance, serverless web applications and premium digital experiences. Proven ability to bypass traditional framework limitations using hyper-optimized Vanilla JavaScript, modern CSS architecture, and scalable Google Workspace backends. Passionate about bridging the gap between rigorous backend engineering and fluid, interactive frontend design.

FEATURED ENGINEERING ARCHITECTURE

1. Serverless Glassmorphic Web App & Proxy System

Creator & Lead Developer

- **Zero-Cost Infrastructure:** Architected a custom lead-generation backend using Google Apps Script and the GmailApp API, bypassing third-party form providers to handle secure JSON payloads, database logging, and automated client email routing.
- **Search & Open Graph Proxy:** Engineered a GitHub Pages proxy to bypass strict Google robots.txt scraping blocks, delivering JSON-LD structured data and Open Graph metadata to AI answer engines and social media crawlers.
- **High-Performance UI/UX:** Developed a framework-free frontend utilizing CSS Glassmorphism, achieving instant load times and 60fps scrolling while natively handling strict Content Security Policies (CSP).
- **Interactive DOM Physics:** Programmed custom JavaScript physics for magnetic UI elements and integrated a responsive HTML5 Canvas particle network that safely leverages graceful degradation on mobile hardware.

2. Roxas NIS Pro (Nutrition Information System)

Full-Stack Developer & UI/UX Lead

- **Data-Driven Architecture:** Engineered a comprehensive serverless health dashboard utilizing Google Apps Script to dynamically query, parse, and visualize community health and nutrition metrics from secure Google Sheets databases.
- **Dynamic UI Engineering:** Developed an interactive, state-managed frontend using HTML, JavaScript, and Tailwind CSS. Implemented complex DOM recalculation algorithms to render real-time barangay-level comparison charts, doughnut graphs, and animated KPI cards.
- **Modern Government Aesthetic:** Designed a highly professional, "clean and futuristic" user interface featuring seamless dark/light mode toggling, optimizing the user experience for local government unit (LGU) data analysts and health officers.

PROFESSIONAL EXPERIENCE

Full-Stack Developer
Jul 2024 – Present

Local Government Unit (MHO)

- Architecting serverless data pipelines, developing the ROXAS NIS PRO dashboard, and automating health metrics reporting using Google Apps Script and modern JavaScript.

UI/UX & Systems Developer
Jul 2021 – Jun 2024

Freelance / Contract

- Designed and deployed customized organizational portals, digital branding assets, and automated workflow systems focusing on high-performance, responsive interfaces.

Frontend Web Developer
Jan 2019 – Jun 2021

Freelance / Contract

- Built and maintained client-facing web applications using HTML5, CSS3, and JavaScript. Specialized in transforming static wireframes into interactive, accessible layouts.

TECHNICAL ARSENAL

Frontend

Vanilla JavaScript (ES6+) | Tailwind CSS | HTML5 Canvas | CSS3 (Glassmorphism)

Backend & APIs

Google Apps Script | RESTful APIs | Fetch API (no-cors) | Serverless Architecture

Tools & DevOps

Git/GitHub | GitHub Pages | JSON-LD (AEO/SEO) | Google Analytics 4

Design

UI/UX Design | Wireframing | Micro-interactions | DOM Physics
